COMPOSITERESOURCES

## COMPOSITE RESOURCES ATTAINS DUAL QUALITY CERTIFICATIONS

Rock Hill, SC, November 13, 2009 – Composite Resources, a global leader in the design, prototyping and manufacturing of composite solutions has received notification from Perry Johnson Registrars, Inc. that their organization has attained ISO 9001:2008 and AS 9100 rev. B certifications. The significance of this accomplishment is far reaching as virtually every industry looks for ways to leverage composite materials to solve business problems. ISO 9001:2008 is the latest version of quality management standards set by the International Standards Organization. A business seeks to attain this certification as recognition of efforts made to adopt a quality culture, continuous process improvement, to ensure consistent results and maintain peak customer satisfaction. AS 9100B is an adjunct to the ISO certification and includes even more rigorous quality processes specific to the aerospace industry.

“We are thrilled with our team’s commitment to quality and these certifications are a significant recognition of that effort”, said Forrest Marshall, Quality Manager for Composite Resources. “There are only a handful of composite engineering and manufacturing organizations in the world that have earned both of these quality certifications.” “We are proud that these differentiate us from most of the other companies in our industry.”

In a global market where renewable, modern materials can save weight, add strength and provide durability, companies strive to leverage these new materials whenever they can to reduce cost or improve their product’s performance. However, most organizations don’t know where to turn when they have an idea that would potentially improve their business’ performance.

“It’s easy for companies to confuse composite fabrication shops from those that truly Engineer, Prototype and Manufacture composite solutions”, said Lisa Bennett, Vice President and Operations Director. “These certifications represent our quality process efforts to the Aerospace, Automotive, Military, Medical and Industrial markets that we serve”.

Composite Resources has helped customers from various industries take ideas and turn them into products or solutions through the use of rigorous processes and talented people.

COMPOSITERESOURCES

**COMPOSITE RESOURCES, Inc.** is an engineering, design, prototype development and manufacturing organization in Rock Hill, SC specializing in composite materials. They help their clients develop ideas to find stronger, lighter and more durable components of virtually any kind of manufactured item – from medical equipment to auto racing components.

**Perry Johnson Registrars, Inc.** is a full-service registrar that carries multiple international accreditations. This means PJR has the authority to register organizations, recognizing them for their quality management system's integrity. At PJR, we understand the importance of ISO 9000 registration. This is why we are dedicated to helping an organization achieve its goals.<sup>1</sup>

**ISO (International Organization for Standardization)** is the world's largest developer and publisher of International Standards.

ISO is a network of the national standards institutes of 162 countries, one member per country, with a Central Secretariat in Geneva, Switzerland, that coordinates the system.

ISO is a non-governmental organization that forms a bridge between the public and private sectors. On the one hand, many of its member institutes are part of the governmental structure of their countries, or are mandated by their government. On the other hand, other members have their roots uniquely in the private sector, having been set up by national partnerships of industry associations.

Therefore, ISO enables a consensus to be reached on solutions that meet both the requirements of business and the broader needs of society.<sup>2</sup>
